The following is an examiner's statement of reasons for allowance: Regarding claims 1-20, the prior art of record fails to teach of producing override information signals that are coupled to the operating units when the control signal is present. The closest reference, Hall et al. (U.S. Patent No. 5,661,778), teaches of a system for producing at a transmitter, TDM frames comprising channels of information signals and framing signals, communicating the frames from the transmitter to the receiver and at the receiver, deframing the frames to obtain frame timing signals and a bitstream of information signals which are coupled with operating unit, comprising the steps of: at the transmitter, inserting a pattern of bits in a timeslot of the information signals; at the receiver detecting, in the deframed bit stream, the absence of the pattern of bits, and producing a control signal in response thereto, but fails to teach of producing override information signals that are coupled to the operating units when the control signal is present.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
